DETAILED ACTION

Information Disclosure Statement

1. The information disclosure statements have been received and considered.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

4. Claims 1-3,7,8,9 rejected under 35 U.S.C. 103(a) as being unpatentable over Powrozek '338 in view of Besoyan.

Regarding claims 1,8 Powrozek '338 discloses an electric parking brake actuation assembly including a reversible electric brake actuator 22 with a drive shaft 32 or 40 and capable of functioning as claimed, a manual operable control 16 for transmitting a signal to the motor to operate the motor and a manual brake actuator 78

Art Unit: 3683

(see figures 5 and 11-14) operating in the claimed manner. Note the engagement of elements 90 and 92 forms a torque limiting clutch (see col. 9) via the fingers 140 of 92 engaged with teeth 130 on housing 90. Rotation of 90 via a tool transmits rotation to the gear 80 via the cable 82 and therefore to the shaft 40 via the gear 38 to apply the brakes. See the discussion 9-12.

'338 lacks a specific showing of a handle.

The reference to Besovan is relied upon to show it is known to use handles to actuate the parking brakes at 41.

To have provided the device of '338 with a handle for actuating the manual brake actuator 78 as opposed to a tool would have been obvious to the ordinary skilled worker in the art at the time of the invention for a more convenient and immediate use of the manual actuator.

Regarding claims 2,3,7 as broadly claimed, these requirements are met. See element 12.

Allowable Subject Matter

5. Claims 4-6,10-12 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
